3. Сохраните страницу.

Для натройки правильной работы:

1. Зайдите в настройки формы с колесом и нажмите на список предложений:

2. Вам понадобятся id предложений. Их можно скопировать в блокнот, переписать, запомнить, или пока оставить страницу открытой в отдельной вкладке:

3. Зайдите в редактор «JavaScript: Код колеса» и отредактируйте часть кода, в котором определяются вероятности выпадения секторов:

4. В этой части кода в столбик перечислены номера предложений. Замените эти номера на свои.

5. Напротив каждого номера стоят значения, которые определяют вероятность. «0» — нулевая вероятность.

Вот некоторые правила выставления вероятностей:

- используйте только целый положительные числа
- если хотите равные вероятности у всех секторов, просто выставьте «1» везде
- число в поле — это не вероятность напрямую, а вес. Можно указывать числа больше 1000, а их сумма может быть любое. Вероятность сектора с числом 1000 всегда больше, чем вероятность сектора с числом 33.

6. Сохраните. Пользуйтесь.

Revision #1
